

# Smart Home Automation System

---

## 1. Project Definition

The Smart Home Automation System (ST) is designed to provide homeowners with centralized control of appliances, lighting, climate, and security systems using a mobile or web interface. This system aims to increase convenience, energy efficiency, and home security by automating daily routines and enabling remote control and monitoring.

## 2. Vision Statement

**For** homeowners and residents seeking convenience, safety, and energy efficiency, **who** need a centralized and remote way to control and monitor their home environment, **the** Smart Home Automation System **is** a comprehensive home automation platform **that** allows seamless control of lighting, appliances, climate, and security through mobile and web applications. **Unlike** traditional manual systems or standalone smart devices that lack integration, **our** product offers a unified, user-friendly interface with automation features, real-time alerts, and voice assistant compatibility—delivering a truly connected and intelligent living experience.

## 3. Functional Requirements

### User Authentication

The system shall allow users to register and log in securely.

### Device Management

The system shall enable users to add and manage smart devices.

### Remote Control

The system shall allow users to remotely control lights, fans, AC, and other appliances.

### Device Scheduling

The system shall support scheduling for devices to turn on/off automatically.

### Real-time Status Updates

The system shall provide real-time status updates of connected devices.

### Security Notifications

The system shall notify users of unusual activity such as motion detection.

### Custom Automation

The system shall allow users to customize automation rules.

**User Preferences**

The system shall store user preferences and past activity history.

**Voice Assistant Integration**

The system shall integrate with voice assistants like Google Assistant or Alexa.

**Account Management**

The system shall support logout and account deletion features.

**4. Non-Functional Requirements****System Responsiveness**

The system shall respond to user actions within 2 seconds.

**Availability**

The system shall be available 99.5% of the time monthly.

**Data Security**

The system shall use encryption to secure user data in transit and at rest.

**Scalability**

The system shall support at least 100 concurrent users without performance degradation.

**Cross-Platform Compatibility**

The system shall be compatible with Android, iOS, and modern web browsers.

**User Interface**

The system shall provide an intuitive and accessible UI/UX for all users.

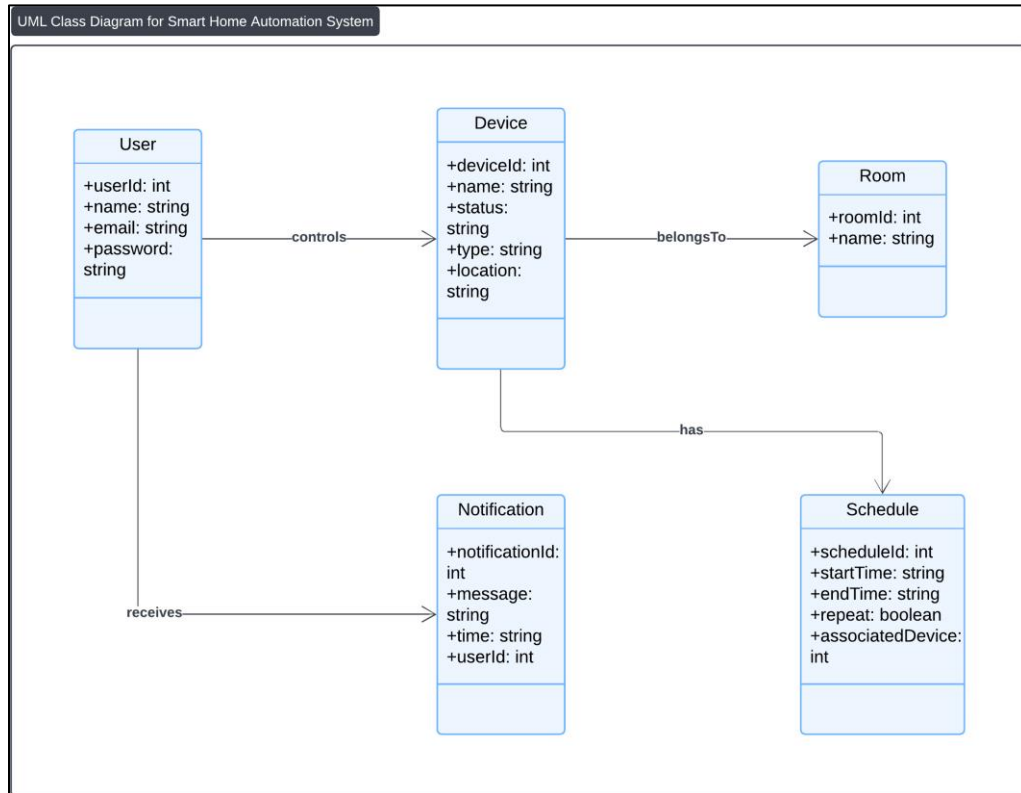

**Device Integration**

The system shall allow integration with at least 5 types of smart devices.

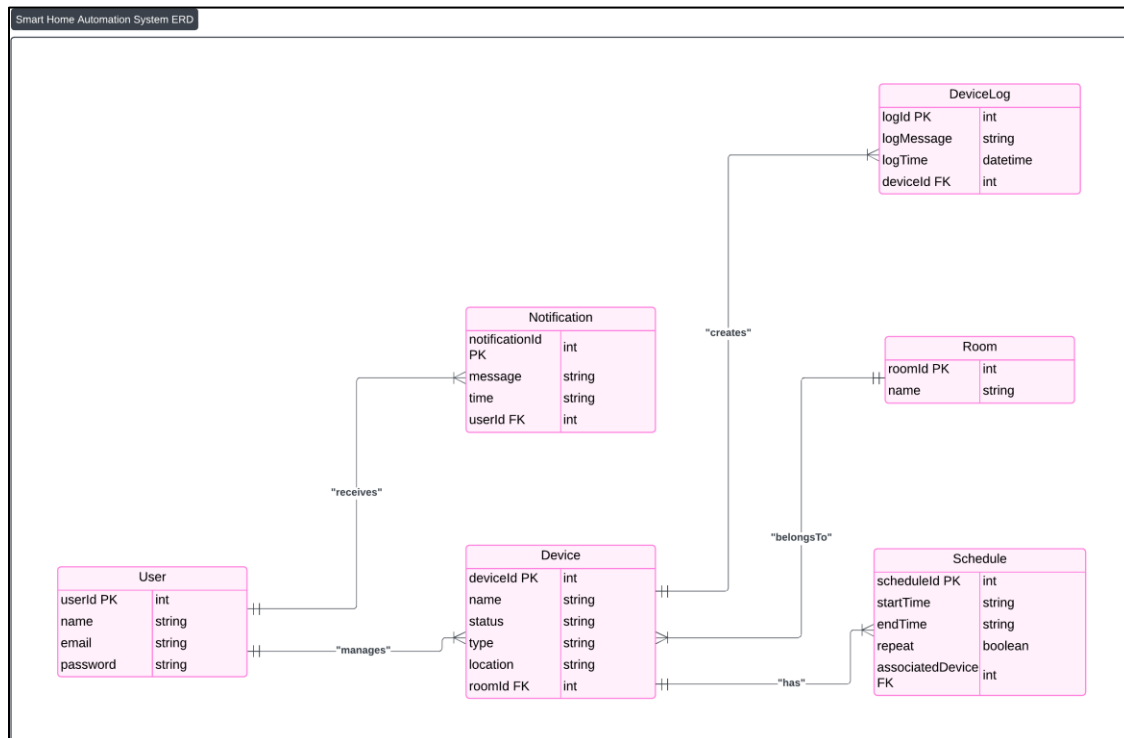

**Firmware Support**

The system shall support firmware updates for connected smart devices.
